## Commercialisation and Export

Promoting early stage commercialisation and strengthening business capabilities.

Business development programs such as the Australian Technology Showcase and BioBusiness help innovators develop technologies, demonstrate capabilities that will be attractive to investors, and build a strong presence in global markets.

Skilled innovation advisors at the Department's NSW Innovation Advisory Service give inventors and small business innovators the opportunity to test their ideas and help them develop and commercialise their inventions. For more information, contact the NSW Innovation Advisory Service on 1300 411 417 or visit the Department's [Small Business website](#).

Innovators can also access the I&I NSW-supported online innovation advisory service [www.ausinvent.com](http://www.ausinvent.com) for information on advisory services, including news and events.
